

OEpic Makes Available H6 Clean Room Space to its Foundry Customers

February 11, 2010, Sunnyvale, California, OEpic Semiconductors, Inc. announced today that it will make available H6 Clean Room space ranging from 300 SF to 2,000 SF to its foundry customers who are interested in installing and operating their own growth, processing or test equipment. This offer is subject to the availability of clean room space which is allocated on a first come first served basis. The lease period is between one and three years with renewal provision.

This offer is open to customers with monthly foundry service contracts with OEpic and has the restriction that the customer's volume of foundry business should exceed the monthly rent of the desired clean room space. Electricity, water, gases (nitrogen and hydrogen), dry air, house vacuum, wastewater treatment, and storage for chemicals, parts, gas cylinders, and similar items will be provided if needed. Access to H2 rooms for gas cabinet installation is also available.

OEpic is a compound-semiconductor foundry for optical and optoelectronic components based in Sunnyvale, California. It offers fabrication services ranging from epitaxial material growth through complete wafer processing and limited packaging and testing. OEpic supports product development programs through initial stages of manufacturing and qualification, as well as R&D programs for academic and commercial institutions.
